

Financial Health Dashboard

Objective

The objective of this project is to analyze financial transaction data and create an interactive dashboard using Power BI. The dashboard provides insights into transaction volume, transaction amount, account activity, and transaction trends.

Dataset Used

The dataset contains financial transaction records along with supporting dimension tables.

Tables Used:

- FactTransaction
- DimAccount
- DimCustomer
- DimCustomerUSA
- DimProduct
- DimProductCategory
- DimProductSubCategory

The dataset includes transaction details such as Transaction ID, Account ID, Transaction Amount, Transaction Date, Product Information, and Transaction Status.

Key Performance Indicators (KPIs)

Total Transactions

Displays the total number of financial transactions recorded in the dataset.

Result: 10K

Total Transaction Amount

Displays the overall transaction value processed across all transactions.

Result: 5.22M

Total Accounts

Displays the total number of accounts involved in the transactions.

Result: 193

Visualizations

Dashboard Overview

The dashboard provides a complete overview of financial performance using KPI cards and visual analytics.

Transactions by Status

A pie chart was created to visualize the distribution of successful and failed transactions.

Observation:

- Successful Transactions: 95.33%
- Failed Transactions: 4.67%

Transaction Amount by Status

A bar chart was used to compare transaction amounts based on transaction status.

Observation:

- Successful transactions contribute the highest transaction amount.
- Failed transactions contribute a small percentage of the total amount.

Transaction Trend Over Time

A line chart was created to analyze transaction amount trends over time.

Observation:

- Transaction amounts vary across different dates.
- The chart helps identify transaction trends and performance patterns.

Dashboard Insights

- Most transactions were completed successfully.
- Successful transactions generated the majority of transaction value.
- The total transaction amount exceeded 5 million.
- The organization maintains 193 active accounts.
- Transaction trends can be monitored effectively using the dashboard.

Conclusion

The Financial Health Dashboard was successfully developed using Power BI. The dashboard provides a clear overview of financial performance through KPIs and visualizations. It enables users to monitor transaction activity, evaluate transaction success rates, and analyze financial trends for better decision-making.

The project demonstrates the effective use of Power BI for financial data analysis and business intelligence reporting.
